PRODUCTS AND TOTAL SECURITY SOLUTIONS

With the worldwide threat of crime and terrorism increasing daily, the demand for high quality video surveillance systems is also growing rapidly. Users are demanding new capabilities and greater efficiency from their security systems. GSA is dedicated to the goal of providing high performance products that introduce features and capabilities that push the boundaries of what can be done with those products. We are redefining what you should expect from total security solution. GSA security solution products are based upon cutting edge technologies that are unique in the security industry. When you try our products you will experience the difference that these technologies provide.

The product line up includes:

ACCESS CONTROL SYSTEMS

Access Control systems are about more than monitoring doors; they are an integral part of any security system and give users a convenient platform to manage their facilities. Traditional keys cannot track who or when people are accessing your building, and when keys go missing rekeying locks can be extremely expensive. Our Access Control systems solve all of these problems and many more, including:

- ✓ *performing a facility or area lock down from any PC or Keyscan reader*
- ✓ *bringing motion detectors, glass breaks, door contacts, panic buttons to track and assign alarm conditions from a single interface*
- ✓ *calling up live video in the event of an alarm*
- ✓ *arming or disarming an intrusion panel via the access control system*
- ✓ *triggering a wide range of devices using auxiliary relay outputs to trip such items as sirens or strobes all based on certain events/conditions*
- ✓ *creating a map with active icons to annunciate system status, control doors, call up video, show employee photos as they pass through protected doors, and much more*
- ✓ *run a myriad of custom reports when you need to know who accessed what area and when*

With powerful features and capabilities designed into every aspect of our products can be confident that we have the solution you are looking for today with the scalability and vision to support you well in the future.

- Door Access
- Elevator Access
- Centrally Managed Access Control (CMAC)

BIOMETRIC SECURITY SYSTEMS

Biometric security (identification) systems identify a human from a measurement of a physical characteristic or behavioral trait (for example, hand geometry, retinal scan, iris scan, fingerprint patterns, facial characteristics, DNA sequence characteristics, voice prints, and hand written signature) to determine or verify an identity. There is typically an enrollment process in which the biological information is taken and stored in a database for future identification or verification purposes. Because biometric security technology relies on biological information about a person, it is typically thought of as more reliable than other identification methods. There are several different types of biometric security technologies:

- **Facial Recognition** technology identifies individuals by analyzing certain facial characteristics such as the distance between the eyes, the length of the nose, and the angle of the jaw. Facial recognition works for both verification and identification and is often used for surveillance purposes.

- **Fingerprint Recognition** is the most widely used method of biometric authentication. Fingerprint recognition is based on features found in the impressions made by unique ridges and valleys on the surface of a human's fingertips.

- **Hand Geometry** is based on the measurement and analysis of the shape of a person's hand. Unlike fingerprints, the human hand is not descriptive enough for identification. However, it can be used for verification by combining various individual features, such as width, height, and length of the fingers, or distance between joints.

- **Iris Recognition** is the process of recognizing a person by analyzing the distinctly colored ring that surrounds the pupil of the eye. With more than 250 unique characteristics, the iris is believed to go unchanged throughout a person's lifespan. This technology is typically used for access control into a facility.

- **Voice Recognition** technology is a biometric security technology used to uniquely identify individuals based on the different characteristics in their voice such as tone, pitch, cadence, etc. The system captures samples of the individual's speech and then converts them to an electronic format to create a biometric template.

COVERT CAMERAS AND SPECIALTY DEVICES

GSA has a full line of covert cameras and specialty devices to address a wide range of unique or special circumstances. Our cameras can be installed in smoke detectors, books, office plants or other common-place objects that can address any situation.

DETECTION EQUIPMENT

Walk-through metal detectors are one of the most common forms of contraband detection devices used at public facilities. Metal detectors are often found in the entranceways of government buildings, in airports and more and more in our nation's schools.

The more advanced metal detection technologies are able to discriminate between weapons and other innocuous metal objects, such as keys, coins, etc. We offer integrated walk through metal detection capabilities.

FIRE PROTECTION

Fire can devastate any business, large or small; however, with the proper installation of a fire alarm system you can minimize the damage to your business or prevent total loss. Simply stated, the best defense against fire is early detection, which is why; Guard Security Agency, Ltd. provides state-of-the-art fire alarm protection to mitigate risk to your premise, your employees, and your bottom line.

Our systems are capable of being integrated with other building components like access control, CCTV and security management products and are recognized for dependability, flexibility and survivability. Whether a new or existing structure, small single-story building or high-rise office complex; Global Security Services, Ltd. has the system to address your individual security requirements.

GPS TRACKING

Whether you need to track one vehicle or a hundred, Guard Security Agency, Ltd. can provide the resources to protect your assets, vehicle and people.

GUARD BOOTHS

Security guards, military personnel and other government officials have a tough enough job without worrying about the performance of the building they use for their shelter and the shelter of the equipment they rely on to perform their duties.

We manufacture a wide variety of guard booths to meet the needs of virtually any security application that enable security personnel to focus on the job at hand. Our pre-engineered design is a great alternative to a conventionally built guard booths. To offer our customers the widest selection of construction options, we manufacture different types of steel, Wooden and concrete structures. During the production phase, quality control is of the utmost importance for every booth

As a custom manufacture, we create guard booths that address every detail of design required for the project. Each booth is designed with the philosophy that both form and function have shared importance. To accomplish this goal we use time tested construction methods to create a booth that will hold up even under the heaviest usage.

INTEGRATED SYSTEMS

When it comes to protecting people and property against the threats of the modern world, there's no substitute for experience. Considering the number of network-based security systems we've installed, the depth of our technological experience, and the locally delivered support we can deliver across Ghana, Guard Security Agency Limited offers a safe choice for a total security solution.

INTRUSION ALARMS

There is no disputing the facts... the number of hacking and intrusion incidents is increasing year on year as technology rolls out. Unfortunately in today's inter-connected eCommerce world there is no hiding place: you can be found through a wide variety of means: DNS, Name Server Lookup, Newsgroups, web site trawling, e-mail properties and so on.

Whether the motivation is financial gain, intellectual challenge, espionage, political, or simply trouble-making, you may be exposed to a variety of intruder threats. Obviously it is just common sense to guard against this, but business imperative. Intrusion Detection Systems are like a burglar alarm for your

- *Fire Alarms*

SURVEILLANCE SYSTEMS

Stimulated not only by the tragic terrorist events of the last decade, but also by improved technology and a reduction in prices, CCTV (closed circuit television) security surveillance systems are common parts of an organization's physical security systems.
These security surveillance systems monitor activity in or around a property within an internal network that does not receive an outside signal or feed. Surveillance cameras are placed in strategic locations and either record activity on tape and/or are monitored by a security control center. These systems must be integrated with alarm systems and additional security elements, as well as the appropriate lighting, in order to be effective. There is a need to integrate surveillance systems with secure portals to ensure proper recognition of potential intruders.
